Version	First-stage coefficient	SE	F-statistic	Verdict
Original study	0.631	(0.090)	49.2	Strong
1990s only	0.815	(0.172)	22.4	Strong
2000s only	0.528	(0.095)	30.6	Strong
With better control	0.603	(0.096)	39.3	Strong

First stage: US exposure regressed on the instrument (exposure to Chinese imports in 8 other rich countries) plus all controls. An F-statistic above 10 is the usual rule of thumb for a strong instrument. ADH report 0.631 (0.087) for the original specification (Table 3, column 6).
